Complete guide to install and configure the converter and HUD for PPPoker

Over the past

few years, mobile poker apps from 0 Asia have become a breath of fresh air for professional players. Very lucrative pools and weak opponents have become a 0 powerful argument for the poker migration. And the constantly deteriorating playing conditions in the leading poker rooms stimulate even the 0 most conservative players to seek alternatives.

One of the most popular mobile applications is PPPoker. In terms of traffic volume, PPPoker 0 significantly surpasses most similar places for the game. The mobile poker room regularly holds various promotions to attract new players, 0 signs contracts with professional players, and even conducts large offline series. Everything seems to be good, but what's the catch?

The 0 catch lies on the surface: PPPoker is a

mobile poker application, which means that neither PokerTracker 4, Holdem Manager 3, 0 Hand2Note, nor DriveHUD can directly import hand histories from there. Hence, no HUD and no statistics while playing. Are we 0 putting an end to the plans to develop new PPPoker waters? No matter how it is! There is a solution 0 and it is called "PPPoker HUD Catcher".

What is PPPoker HUD Catcher?

PPPoker HUD Catcher is a poker program that

works in 0 conjunction with Holdem Manager 3, PokerTracker 4, Hand2Note, DriveHUD and allows you to display HUD and import hand history while 0 playing in the PPPoker application. Unlike most other Asian poker applications, PPPoker has recently had a significant advantage - an 0 official client for Windows. In practice, the availability of PPPoker on PC also saves you from a headache of setting 0 up Android emulators. HUD Catcher works both at cash tables and in tournaments.

The poker room does not prohibit

the use 0 of poker trackers (although there is no separate list with allowed programs on PPPoker). In practice, no one had any 0 problems with the HUD.
