Abstract

The CPU handles all the tasks required for all software on the server to run correctly. A GPU, on the other hand, supports the CPU to perform concurrent calculations. A GPU can complete simple and repetitive tasks much faster because it can break the task down into smaller components and finish them in parallel.

[bets99](#)

CPUs are optimized for sequential tasks, while GPUs are optimized for parallel tasks. To get the best gaming performance, it's important to have a balanced system where the CPU and GPU complement each other, rather than one significantly outperforming the other.
