Vai de Bet é uma das primeiras operadoras do bônus da apostas esportivas no Brasil. Se você está procurando por 2 informações sobre como trabalhar o Bónu De 20 dos anos, vai saber que você veio ao lugar certo! Neste artigo 2 : Vamos explicar tudo quem quer dizer aquilo

O que é o bônus de 20 do Vai De Bet?

O bônus de 2 20 do Vai é uma promoção que oferece aos jogadores um chance ganhar até R\$ 20,000.00 vaidebet localização dinheiro. Este Bónu 2 e Uma das primeiras pessoas da ópera, está disponível para todos os jogos sem receita no site vai fazer isso!

Como 2 funciona o bônus de 20 do Vai-de - Bet?

Para ganhar o bônus de 20 do Vai, você precisará seguir algumas 2 etapas simples:

Knowing how to count outs in poker is one of the first mathematical principles you must master when starting.

Fortunately, counting poker outs is not too difficult, and there are some easy ways to figure out how many outs you have in each situation.

But what exactly are outs in poker, and how can you use them to be a better poker player?

We will explain all that and more. By the time you are done reading, you will know what outs are, how to count them, and how to calculate your equity based on the number of outs you have.

What are Poker Outs?

Outs in poker are cards that help improve your hand.

For example, if you are holding a pair of kings against pocket aces, you have two outs to hit your set since only two kings are left in the deck.

Of course, outs come into play much more once the flop is dealt and you are working with five cards. In this case, you will often not have a made hand yet and will be looking to improve, so understanding this concept is essential.

Any card that will improve your hand can be considered an out, although not all poker outs carry the same weight, so let's dive into that a bit deeper.

How to Counts Outs in Poker

Since you already know what poker ours are, let's discuss how to count it.

Simply put, you need to figure out which cards will help improve your hand and then think about all the cards in the deck.

In the example of a flush draw, you currently hold two hearts in your hand, and there are two hearts on the flop. Since we know there are 13 hearts in the deck, you have nine outs to make your flush.

However, other cards may also help your hand. For example, if your flush draw contains an ace,

which is an over card to the board, any of the remaining aces could make you the top pair. Since you are holding the ace of hearts, three additional aces could land on the turn or river, increasing your outs count by three.

Whatever your current hand is, you should try to think about all cards that will improve it on the turn or river and count those cards to come up with your total outs count.

As you get better at it, you will immediately know how many outs you have in some common situations.

Here are a few frequent flop situations that arise in poker that you should know by heart:

Inside Straight Draw: 4 outs to a straight

4 outs to a straight Set: 10 outs to a full house or four of a kind

10 outs to a full house or four of a kind Open-Ended Straight Draw: 8 outs to a straight

8 outs to a straight Flush Draw: 9 outs to a flush

9 outs to a flush Open-Ended Straight Flush Draw: 15 outs to a straight or a flush

It is important to know that not all outs are “clean,” so it is important to separate between cards that can turn our hand into nuts and ones that can only make it slightly stronger.

You have nine outs to hit your flush if you have a flush draw

How to Use Poker Outs in Game

So now you know how to count outs in poker, but you still don't really know how this will help you be a better poker player.

After all, knowing how many cards will help you is nice, but it won't help make those cards appear on the turn or river.

Since there is no way to know which cards are coming, all we can do is calculate probability and use it to our advantage.

This probability is known as equity in poker, and it determines how likely we are to improve our hand and ultimately win the pot by simply having the best hand by showdown.

Knowing the number of outs we have is the first step to calculating equity in a poker hand. The next step is to use maths to calculate what percentage of the time you will make your hand.

Let us assume we are holding Ks Qs on a board of As 9s 4c. Our opponent is relatively tight and passive and is now betting into us, which means they are likely holding at least a pair of aces.

In this case, we have nine outs to make our flush, and any other outs we may have won't really help us, as we will still probably lose if a K or Q comes on the turn or river.

We know that there are 52 cards in the deck, and we can see five of those cards, leaving us with a total of 47 cards left, nine of which are spades.

A simple division of 47:9 tells us that we are looking at a ratio of 4.22:1, which translates into 19.16%. However, it is also important to remember that there are still two cards left to come.

Since both turn and river are going to be dealt out, we need to calculate for both those cards and realize that our equity will slightly improve going to the last card if the turn is not a spade since there will be one fewer card in the deck.

So for the turn, we have 46 cards left with still all of the 9 spades in the deck. Using the same logic and dividing 46:9, we get a 4.11:1 ratio which gives a 19.57% chance of hitting your flush.

When all these calculations are considered, the equity we come up with is 38.73%.

This does not include the runner-runner straight possibility when holding KQ, so the actual number is slightly different, but it is the best way to illustrate this example. That being said, these calculations can take some time to do at the table and are very impractical. Therefore, there is a much simpler solution to calculating your approximate equity based on your number of poker outs.

Using the Rule of Two and Four

The equity calculations we did in the previous example are kind of complicated, and it would be tedious to do them in the middle of a hand while facing the pressure of a bet.

Instead, there is a much simpler way to calculate your equity without complicated math.

If you are on the flop, take the number of outs and multiply it by four.

If you are on the turn, take the number of outs and multiply it by two.

In the previous example, we looked at an example of a flush draw, and we calculated the equity of

38.73% on the flop and 19.57% on the turn.

If we apply the rule of two and four to this example, we will come up with 36% (9x4) on the flop and 18% (9x2) on the turn.

You can see that these numbers are not perfect, but they are within 2% of the real equity, and they take only a few seconds to calculate.

We also highly recommend remembering the equities of the most common scenarios, such as flush draws, straight draws, and sets by heart, but using the rule of two and four in all other scenarios.

Q9 had 6 outs on the flop, which would mean approximately 24% equity

Calculating Equity with More than Nine Outs

As the number of outs becomes higher, using the rule of two and four will start to deviate from true equity more and more.

For that reason, there is another formula you should remember and use when you have more than nine outs on the flop in a poker hand.

The formula is:

$$\text{Equity} = (\text{Number of outs} \times 4) - (\text{Number of Outs} - 8)$$

Let us imagine we have 15 outs and run the calculation:

$$\text{Equity} = (15 \times 4) - (15 - 8)$$
$$\text{Equity} = 60 - 7$$
$$\text{Equity} = 53\%$$

We would have got 60% using the rule of two and four, while the new formula says 53%.

The true equity of this situation is 54.1%, which means that this formula gets us closer to the exact result than the previous one.

Combo Draws and “Dirty Outs”

There are many possible situations that can arise in a hand of Texas Hold'em, and our poker outs count can go up and down with every new card that hits.

When counting outs, we should distinguish between outs that make us the nuts and those that simply improve our hand.

For example, let us imagine a scenario in which we are holding Jc Tc, and the flop comes out Ac 9c 8s. In this scenario, we have open-ended straight and flush draws.

Our open-ended straight draw will give us the absolute nuts on both sides, while our flush draw will give us a strong flush, also very likely to be the best hand.

Since this is the case, we can count all our outs in full and consider this as a 15-out situation, a fairly rare occurrence in Texas Hold'em.

On the other hand, imagine holding Ah 7h on a board of Kh 6h 4d. Here, nine outs to a flush give us the absolute nuts and are considered “clean” outs.

We could also hit an ace which would give us top pair, but having top pair in no way guarantees that we have the best hand. In fact, hitting that card could even cost us some money.

Depending on factors such as the player we are playing against and the positional situation, we may still consider the ace to some degree but definitely should not count it as a “clean” out to win this pot.

Outs can get even dirtier than that, as hitting the second or third pair to the board can also win us the pot sometimes, but such cards should never be counted as true poker outs.

When calculating your equity in a poker hand, you should only seriously consider poker outs that guarantee you will have a very strong hand that's unlikely to be beaten by your opponent's perceived hand.

What is Next?

Now that you know how to count outs in poker and turn the number of outs into equity, you can start applying this knowledge at the tables.

We highly recommend looking into our guides on pot odds and implied odds, which will help you further understand how to use equity and make better decisions.

After all, knowing you will win a hand 36% of the time is not enough to beat good poker players in the long run, so you should use this information as a starting point. Combine your understanding

of counting outs, pot odds, and implied odds, and you will be working with an arsenal that can help you defeat even proficient poker players.

Conflitos marcam congresso de partido da extrema-direita alemã

Enfrentamentos entre manifestantes encapuzados e policiais marcaram o início de um congresso do partido Alternativa para a Alemanha (AfD), partido de extrema-direita da Alemanha, semanas após obter resultados recorde nas eleições europeias, apesar de vários escândalos.

Cerca de 1.000 policiais foram mobilizados na cidade ocidental de Essen, onde cerca de 600 delegados começaram uma reunião de dois dias, com autoridades esperando até 80.000 pessoas para se juntarem às manifestações.

"Ocorreram várias ações disruptivas e violentas no bairro de Rüttenscheid. Manifestantes, alguns

encapuzados, atacaram as forças de segurança. Foram feitas algumas prisões", disse a polícia da região do Reno do Norte-Vestfália

Um alto funcionário regional havia advertido que "potenciais perturbadores violentos de esquerda" poderiam estar entre os manifestantes.

"Estamos aqui e vamos ficar", disse a co-presidente do AfD, Alice Weidel, ao abrir o congresso e despertar aplausos sustentados.

"Temos o direito, como todos os partidos políticos, de realizar um congresso."

Tabela de resultados das eleições europeias:

Partido	Votos	%
CDU-CSU	10.851.527	28,9%
AfD	4.132.984	16,1%
SPD	3.978.530	15,8%

Além da tensão política, as forças de segurança também tiveram que lidar com a Eurocopa de 2024, com a partida entre a Alemanha e a Dinamarca a ser realizada em Dortmund, próximo a Essen, no sábado.

No início de junho, o AfD obteve seu melhor resultado nas eleições europeias desde a criação do partido em 2013, conquistando 16% dos votos e ficando em segundo lugar.

Foi superado pela principal coligação de oposição conservadora CDU-CSU, mas ficou à frente dos social-democratas (SPD) – o partido do chanceler, Olaf Scholz – que estão no poder à frente de uma fragil coalizão de três partidos.

Impulsionado por um aumento na imigração e um desempenho fraco da maior economia da Europa, o partido chegou a alcançar 22% nas pesquisas de opinião em janeiro. No entanto, seu apoio caiu meio a uma série de escândalos que envolveram principalmente seu principal candidato às eleições europeias, Maximilian Krah.

"Acredito que o partido tenha aprendido muito nos últimos meses e será muito cuidadoso ao indicar candidatos de destaque no futuro", disse Weidel, que se candidata à reeleição, à
