Six people who shared a meal involving kebabs of meat with black bear were diagnosed as trichinellosis, a parasitic zoonotic disease.

In a new report published this week, the Centers for Disease Control and Prevention (CDC) revealed that fortune tiger bullsbet July 2024 was reported to the health department of Minnesota a patient hospitalized with suspected trichinellosis 29 years. Her symptoms included fever; severe muscle aches or orbital edema eye swelling – a condition elevated for elevated levels of these white blood cells - Eosinophilia in the blood!

According to the report, a week before the symptoms appeared to the patient and eight other people shared a dish that included meat of black bear frozen for 45 days until cooked.

An investigation about the incident found six cases of trichinellosis, including two fortune tiger bullsbet people who ate only vegetables. Trichinellosis is a parasitic disease caused by the larvae of the nematode a type of round worm; Normally the meat contaminated with the three species comes from carnivorous animals like bear or wild boar. The molecular tests discovered that the larvae of the bear meat were frozen fortune tiger bullsbet in a home freezer for more than 15 weeks and the trichinella native, a species resistant to freezing. The CDC warns for the fact that meals should be adequate to the kitchen to be fortune tiger bullsbet the only reliable way with the parasites of dead animals by the Trichinella; besides that is possible to contaminate other foods through this same substance contaminated!

The CDC reports that six days before the start of symptoms in the initial patient, he and eight family members from Arizona, Minnesota and South Dakota gathered fortune tiger bullsbet Dakota Sul for several days during the reunion they ate meats from a black bear killed by the family member in the north Saskatchewan (Canada) May 2024

According to the report, the meat was "initially inadvertently served rare because it was dark and difficult for the family members to determine visually its level".

"After that some of the family members started to eat the meat and noticed the bad cooking, it was recooked before being served again".

Three of the six symptomatic people, two of them sought treatment at least the double before receiving the offered treatment and all three patients received a medication to treat a variety of the parasitic virus.

All six symptomatic people recovered, with the CDC reporting that the patients did not

hospitalizados receberam tratamento direcionado à triquinose porque seus sintomas haviam resolvido apenas por cuidados de suporte.

Em todo os EUA, a trichinelose raramente é relatada. A maioria dos casos relatados se relaciona ao consumo de carne do jogo selvagem

De janeiro de 2024 a dezembro 2024, houve sete surtos nos EUA que foram relatados ao CDC. A carne do urso era suspeita ou confirmada fonte da infecção para maioria desses focos (afirma o CCD).
