About the Algorithm

The first computer program to outplay human professionals at heads-up no-limit Hold'em poker

In a study completed December 2024 7 and involving 44,000

hands of poker, DeepStack defeated 11 professional poker players with only one outside the margin of statistical 7 significance. Over all games played, DeepStack won 49 big blinds/100 (always folding would only lose 75 bb/100), over four standard 7 deviations from zero, making it the first computer program to beat professional poker players in heads-up no-limit Texas hold'em poker.

Games 7 are serious business

Don't let the name

fool you, "games" of imperfect information provide a general mathematical model that describes how 7 decision-makers interact. AI research has a long history of using parlour games to study these models, but attention has been 7 focused primarily on perfect information games, like checkers, chess or go. Poker is the quintessential game of imperfect information, where 7 you and your opponent hold information that each other doesn't have (your cards).

Until now, competitive AI approaches in imperfect

information 7 games have typically reasoned about the entire game, producing a complete strategy prior to play. However, to make this approach 7 feasible in heads-up no-limit Texas hold'em—a game with vastly more unique situations than there are atoms in the universe—a simplified 7 abstraction of the game is often needed.

A fundamentally

different approach

DeepStack is the first theoretically sound application of heuristic

search methods—which 7 have been famously successful in games like checkers, chess, and Go—to imperfect information games.

At the heart of DeepStack is continual 7 re-solving, a

sound local strategy computation that only considers situations as they arise during

play. This lets DeepStack avoid computing 7 a complete strategy in advance, skirting the need for explicit abstraction.

During re-solving, DeepStack doesn't need to reason

about the entire 7 remainder of the game because it substitutes computation beyond a certain depth with a fast approximate estimate, DeepStack's "intuition" – 7 a gut feeling of the value of holding any possible private cards in any possible poker situation.

Finally, DeepStack's intuition, much 7 like human intuition, needs to be trained. We train it with deep learning using examples generated from random poker situations.

DeepStack 7 is theoretically sound, produces strategies substantially more difficult to exploit than abstraction-based techniques and defeats professional poker players at heads-up 7 no-limit poker with statistical significance.
