These strategies are well-known probabilistic theories that are described in more detail here. These concepts are, however, limited in their effectiveness. But they can give the strategist an advantage over the laity and seem to work for a certain period of time. While the player has to decide on a prediction before the occurrence of a random event, the decision is made randomly. The roulette engine must be designed in a way, that no safe prediction about the next event can be made. So a random event can not be predicted, nevertheless we can look more closely at random events and make certain statements. It is certain that 1 event from 37 or 38 possible random events will occur. The goal of the roulette player is to stand as a winner in as many of these events as possible.
