Como no Blackjack Infinito, uma mão única é

uída a todos os jogadores. Evolução adicionaBlack blackJack de Apostila Livre e 2 Mãos One of the most common blackjack side bets in California card rooms is known as Buster Blackjack (BBJ). I found this documentation online. The player who makes the BBJ wager wins if the dealer busts. The payout is then based on the total number of cards in the dealer's busted hand. There are a lot of details to share, so I've decided to break up the discussion into the six-deck case and the two-deck case. This article covers card counting BBJ in a six-deck shoe game.

When I was asked about the vulnerability of BBJ

to card counting by one of California's largest banking corporations, I told them "not very." After all, the dealer needs low cards to generate hands with lots of cards, he needs mid-cards to give stiff totals of 15 and 16, and he needs high cards to bust hands. My intuition was both right and wrong: the difference is the pay table. There are eight different pay tables for BBJ that are in use or recommended. I investigated all eight and found that five of these eight are vulnerable and three are not. There is also a progressive version of BBJ that I did not investigate at all.

To begin with, I

am going to focus on one specific vulnerable pay table for BBJ. This is the most common pay table used by card rooms banked by one of the largest corporations in California.

The pay table is as follows:

Dealer busts with 8+ cards pays 200-to-1.

Dealer busts

with 7 cards pays 100-to-1.

Dealer busts with 6 cards pays 30-to-1.

Dealer busts with 5

cards pays 6-to-1.

Dealer busts with 4 cards pays 3-to-1.

Dealer busts with 3 cards

pays 1-to-1.

Otherwise, the player loses the BBJ bet.

Here is the combinatorial

analysis for this pay table:

In particular,

The house edge is 4.724%.

The standard

deviation is 2.724.

The hit frequency is 28.576%.

The following table gives the effect

of removal (EOR) for each card. The EOR tells the change in house edge by removing a single card of that rank and re-computing the house edge. A positive EOR means that the edge moves towards the player side if the card is removed. A negative EOR means that the edge moves towards the house side if the card is removed.

Notice how much larger

the EOR is for the cards A, 2, 3 than for any other card. With an abundance of these three cards in the shoe, the dealer is more likely to have hands with a large number of cards. Whether the dealer's hand busts or not is beside the point to beat this pay table: the primary goal is to have multi-card hands. Removing a single deuce from a six-deck shoe moves the edge towards the house by 0.77%. That's big. Also, an Ace never busts with fewer than four cards. Removing an Ace from the six-deck shoe moves the edge towards the house by 0.35%.

In the table above, under the column Sys #1, I give tags

for the optimal card counting system #1. I simply use the EOR's to two decimal places, scaled to make the index for a ten-valued card equal to 1. System #1 is not intended to be used in practice. I include it only for purpose of determining an upper bound for the profit possible by card counting BBJ.

Under the column Sys #2, I give a balanced

card counting system that can be used in practice. System #2 shows the importance of the cards A, 2, 3 to the card counter, with deuces the most valuable card. The betting correlation for this system is 0.977. For math geeks, this value is the cosine of the angle between the vectors given by system #1 and system #2. The closer this value is to 1, the more accurate the system.

To analyze these two systems, I simulated one hundred

million (100,000,000) six-deck shoes, with the cut card placed at 260 cards (1 deck from the end), for each system. The following table summarizes the results of these simulations:

Note that system #2 returns 95.0% of the profit that optimal system #1 returns.

These numbers indicate a moderate vulnerability to advantage play. If the AP uses system #2 against BBJ on a fast heads-up game where he gets 200 rounds per hour, and the AP makes a R\$100 wager on BBJ whenever he has the edge, then the AP can earn R\$140 per hour on the BBJ side bet. The AP using system #2 will have an average edge over the house of 5.28% and will make the BBJ bet on 13.29% of his hands.

As I

mentioned at the start of this post, there are eight different pay tables that I considered for BBJ. The following table gives the combinatorial analysis for another pay table in common use:

In particular

The house edge is 4.691%.

The standard deviation

is 1.989.

The hit frequency is 28.576%.

Because a hand that contains an Ace does not bust with fewer than four cards, the increase in payout for busting with three cards does not come into play with a hand that includes an Ace. Moreover, busting with four or more cards has greatly reduced payouts. These two factors eliminate the

effectiveness of Aces to the card counter.

The following table gives the EOR's for this

pay table, along with a card counting system based on these EOR's. In particular, notice how much the EOR for the Ace has changed.

System #3 is a reasonable choice,

based on the EOR's. The betting correlation for this system is 0.973.

I was very

surprised at how different the tags for this pay table are from those developed for the previous pay table. This highlights the profound difference in strategy involved in beating these two pay tables. I know of no other blackjack side bet that has as significant a strategy change for the AP based purely on the pay table being used.

To

analyze this pay table and system #3, I ran a simulation of twenty million (20,000,000) six-deck shoes, with the cut card placed at 260 cards. The results were very disappointing for the AP:

The trigger count is +8.

The average edge is 2.33%.

The bet

frequency is 3.64%.

The number of units won per 100 hands is 0.085.

These numbers

indicate a very low vulnerability to advantage play. If the AP uses system #3 on a fast heads-up game where he gets 200 rounds per hour, and the AP makes a R\$100 wager on BBJ whenever he has the edge, then the AP can earn about R\$17 per hour.

There are two other

pay tables that are similar to this one, paying 2, 2, 4 units respectively for busting with 3, 4 or 5 cards. Simulations against these other pay tables showed an even lower vulnerability to card counting. Because of their low vulnerabilities, I will not include these pay tables in any further discussion of card counting BBJ.

The following

table summarizes the combinatorial analysis for six different pay tables for BBJ:

The

following table gives the results of card counting BBJ against each of these six pay tables.

For pay tables #1, #2, #3, #4 and #5, I used system #2 with tags (-2, -3, -2, 0, 0, 0, 1, 1, 1, 1).

For pay table #6, I used system #3 with tags (1, -3, -2, 0, 1, -1, 2, 1, 1, 0).

The only difference between pay tables #2, #3 and #4 is the top award.

For pay table #4, the AP can earn about 0.737 units per 100 hands by card counting BBJ.

This is as good as it gets for the AP using system #2 in a six-deck shoe game.

The

relative weakness of card counting using system #2 against pay table #5 surprised me; I thought it would do better. These results may be because system #2 was designed for pay table #2. A different count may work better against pay table #5. I'll leave the development and evaluation of that card counting system as an exercise to the reader.

Normally, at this point, I would simulate various penetration levels in the shoe to demonstrate the effectiveness of cut-card placement on game protection. I would then make recommendations for protecting BBJ that follow a standard game protection model for card counting blackjack side bets. In this case, however, it is completely clear how to protect BBJ.

I have only one game protection recommendation for BBJ, and

it's easy:

No mundo dos jogos de azar online, é comum que os jogadores busquem vantagens onabet powder 100 gm relação às casas de apostas. Uma dessas vantagens pode ser a escolha do horário certo para fazer suas apostas. Neste artigo, vamos falar sobre o onabet, uma das casas de apostas online mais populares no Brasil, e te daremos dicas sobre o melhor horário para jogar no onabet.

Por que o Horário é Tão Importante no onabet?

A escolha do horário para jogar no onabet pode influenciar diretamente nas suas chances de ganhar. Isso porque as casas de apostas online, como o onabet, costumam ajustar suas ofertas e probabilidades de acordo com a demanda dos jogadores. Por exemplo, onabet powder 100 gm horários de alta demanda, as casas de apostas podem oferecer probabilidades menores, o que pode afetar seus ganhos potenciais.

Os Melhores Horários para Jogar no onabet

Agora que você sabe por que o horário é tão importante no onabet, vamos lhe dar algumas dicas sobre os melhores horários para jogar:

O novo design de roupa da Nike para a equipe olímpica feminina dos EUA tem sido amplamente criticado nas mídias sociais por atletas e fãs, com um ex-atleta americano descrevendo como uma "costume nascido das forças patriarcais".

Imagens de roupas masculinas e femininas vestida onabet powder 100 gm manequins foram divulgada na semana passada como parte do lançamento da coleção antes dos eventos Paris 3 2024.

A imagem do collant feminino onabet powder 100 gm exibição tinha uma linha de biquíni alta e desencadeou um onda.

"Os atletas profissionais devem ser capazes de competir sem dedicar espaço cerebral à vigilância constante do pube ou a ginástica mental para ter todas as partes vulneráveis onabet powder 100 gm seu corpo expostas", escreveu Lauren Fleshman, ex-atleta dos EUA.

"Os kits das mulheres devem estar a serviço do desempenho, mental e fisicamente. Se esta roupa fosse verdadeiramente benéfica para o rendimento físico os homens usariam-na."

"Este não é um kit atlético de elite para atletismo e campo. Este traje nasce das forças patriarcais que já nem são bem-vindas ou necessárias a fim da visão dos esportes femininos."

Outros atletas também expressaram preocupações, incluindo a saltadora norte-americana Tara Davis Woodhall que postou um comentário no Instagram dizendo: "Espere meu hoo haa vai estar fora".

A Nike disse onabet powder 100 gm um comunicado que o design do collant será uma dentre vários estilos para escolher, além das opções disponíveis nos próximos Jogos Olímpicos.

Em um comunicado de imprensa na semana passada, a Nike disse que todos os seus projetos foram produzidos onabet powder 100 gm parceria com as necessidades dos atletas.

"Trabalhando diretamente com atletas onabet powder 100 gm todas as etapas do processo de design, a Nike projetou roupas para garantir que se encaixem numa variedade dos tipos corporais e preferências no estilo", disse John Hoke.

Um porta-voz da BR Track and Field (USATF) também disse que as roupas no lançamento eram apenas duas de muitas opções "incluindo 50 peças únicas"

"As opções 3 e escolhas de atletas foram a força motriz para o USATF no processo do planejamento com Nike", disse onabet powder 100 gm comunicado.

A 3 USATF também está ciente de que a Nike consultou atletas durante todo o processo do projeto para garantirem-se confortáveis e 3 os uniformes adequados aos seus respectivos eventos."

A campeã olímpica Katie Moon, uma atleta da Nike disse que a imagem 3 do uniforme no manequim era "preocupante" e garantia onabet powder 100 gm resposta", mas confirmou outras opções disponíveis para os atletas caso escolhessem.

"Se 3 você honestamente acha que nos dias mais importantes de nossas carreiras estamos escolhendo o nosso vestido para apaziguar os homens, 3 observando aquilo onabet powder 100 gm quem somos confortáveis e confiantes; executar com as melhores habilidades é muito ofensivo", escreveu ela no Instagram.

No 3 entanto, onabet powder 100 gm um post no X anteriormente conhecido como Twitter (Twitter), Fleshman postou uma {img} que dizia: "Citius altius 3 fortious sexiest", jogo de palavras com referência ao antigo lema olímpico do tema "Mais rápido e mais alto.

Seu post foi 3 intitulado: "Novo lema olímpico lançado onabet powder 100 gm homenagem ao novo Team BR Track and Field Uniforme revelar!".

A crítica vem onabet powder 100 gm meio 3 a um longo apelo à mudança, que giram ao redor de uma superpolícia do vestuário feminino ou se adapta sexualizar 3 o esporte das mulheres.

Em Tóquio 2024, por exemplo, a equipe de ginástica feminina alemã se recusou usar unitards cortados onabet powder 100 gm 3 biquíni para versões completas do corpo inteiro.
