Choosing the best storage solution

How and where can you start storing and stocking those products more intuitively to reduce the walk sequence of your pickers? Where does each product come from? What size and volume of storage bins are needed to store each product? What is the life cycle of the product? Ensure to support your efforts with the storage solutions that work best for your warehouse. Modular storage bins, flow racks, packing stations, and picking carts can help you get those products exactly where they need to go while providing the flexibility you need to shift and adapt as you learn better how to store and keep track of your inventory.

Product Picking and Order Processing Inefficiencies

Product picking and order processing inefficiencies are an increasing challenge for supply chains, especially as e-commerce orders continue to soar. Adapting to smaller pick orders on shorter return times requires complete optimisation of the product picking process, you stand to increase profitability by boosting the number of orders your warehouse can pick and ship in a shift or day. "First In, First Out" or FIFO with modular storage bins may provide the answer. Especially for applications where products have a shelf life or expiration date, it's essential to pick and pack the oldest products in the warehouse first. The PIX® range of storage solutions can help support FIFO. From picking carts to organised storage bins, there are many tools you can implement in your warehouse to deliver products to pickers in a way that supports FIFO throughout your warehouse. Don't address material flow in a single aspect. Where material comes from, where it needs to go, and the method of fulfilling this process are all aspects to consider with a warehouse storage system. Custom

workstations are another ideal warehouse solution. Packaging and repackaging for order processing is a drain on profitability. When everything your operators need is within easy reach, and their workstations are organised according to their specific needs, you can improve process time and save space.

Product Handling Errors and Inefficiencies

When items are mis picked or damaged in the warehouse, those inaccuracies and breakages are paid for by the facility. While some level of product handling damage is expected, minimising it can go a long way to improving your facility's returns. The solution: Organisation, proper warehouse storage, and material handling solutions that reduce damage. The first step in minimising product handling damages is to reduce product handling. This may seem elementary but take the time to walk through the process for each product and see how many times it is touched before it is packed, then look for opportunities to reduce handling. A poorly organised warehouse often means overloading shelves and racks, which can lead to significant damages and mixing up of stock as it falls from pick faces. PIX® SLOTS can be designed with angled shelving to alleviate these handling errors and damaged products, with no lips to the shelving being needed and smaller stock items that are prone to sliding to the floor retained in the pick bins.

Managing Fluctuations in Demand
