A term you'll hear a lot when talking about poker odds and expected value is "equity."

Let's take a closer look at what that is.

WHAT IS EQUITY?

Equity is the percentage of

the pot that is "yours" based on the likelihood of you winning the hand. The term is often used interchangeably with the likelihood of winning, so if someone says they have 20% equity in the pot, it means they have a 20% chance of winning the hand.

There are

three possible ways of calculating equity: hand vs hand, hand vs range, and range vs range. Working out equity for one hand against another is easy, but we often don't have the luxury of knowing what our opponent has, so we need to look at equity in terms of hand vs range.

To do this, we compare our hand to all the hands in our opponent's range to calculate our total equity. Followers of poker legend Phil Galfond may be familiar with this concept, as it's the basis for his "GBucks" theory.

This theory advances the

concept of Sklansky dollars and applies it to a range vs hand scenario. It's quite complicated, so I'll do my best to cut it down to bullet points.

Take the equity of

your hand against each part of your opponent's range.

Multiply your equity by the

number of hand combos in each part of your opponent's range.

Add up the total of the

results from each section.

Divide by the number of total hand combos in your opponent's range.

This will give you the average amount of equity your hand has against your opponent's range.

Given how complicated this is at the table and the fact that most casinos won't provide you with a pen and paper or wait the half an hour it would take to work it out, most people don't use this at the tables. Instead, they use a rough version where you try to work out equity against different parts of their opponent's range and average them together. But, of course, even that takes time if you're not used to it!

HOW TO CALCULATE YOUR EV

While we can use pot odds to work out whether or not a call will be profitable, we can't use it to put an exact number on how profitable or unprofitable it will be. If we want to do this, we need to calculate the expected value of a decision (EV), which is the average result of our play if we were to repeat it hundreds or thousands of times.

This is the equation for working out your expected value:

$$EV = (\text{Win \%} * R\$ \text{ Won}) - (\text{Lose \%} * R\$ \text{ Lost})$$

Simply put, if the EV is a positive number, you're making a profitable play, and if it's a negative number, you're making a losing play.

For example, we have a flush draw on the turn, and our opponent has bet R\$10 into a R\$50 pot. The pot odds calculation says we need 16.66% equity to call, and we know from the poker outs calculation that we will make our flush 18% of the time, but exactly how profitable is our play?

$$EV = (18\% * R\$60) - (82\% * R\$10)$$

$$EV =$$

$$(\$10.80) - (\$8.20) = R\$2.60$$

We can see that the expected value of our R\$10 call on the turn is R\$2.60, and we confirm that our call is profitable.

Reforma judicial en México: una toma de poder que pone en riesgo la democracia

El presidente mexicano, Andrés Manuel López Obrador, está empujando una reforma judicial que, según él, combatirá la corrupción, pero sus críticos la ven como una toma de poder que erosionará la independencia judicial y expandirá el alcance de su movimiento político.

Los cambios propuestos convertirían el poder judicial en un sistema electoral con menos requisitos para postularse, lo que podría obligar a más de 5000 jueces a renunciar, desde la presidenta de la Suprema Corte hasta los jueces de distrito locales.

Esta ruptura del poder judicial es el punto culminante de un mandato en el que López Obrador ha empujado por un cambio radical, argumentando que mejorará la gobernanza, pero los críticos advierten que podría poner en peligro la democracia y el Estado de derecho de la nación.

Miles de jueces y trabajadores de los tribunales en todo el país se han declarado en huelga en protesta, y el embajador de EE. UU. la semana pasada llamó al esfuerzo de López Obrador en sus últimas semanas de su periodo de seis años "un riesgo para el funcionamiento de la democracia en México".

Un cambio radical en el poder judicial

La reforma judicial propuesta por López Obrador modificaría el poder judicial para convertirlo en un sistema electoral con menos requisitos para postularse, lo que podría obligar a más de 5000 jueces a renunciar, desde la presidenta de la Suprema Corte hasta los jueces de distrito locales.

Cambios propuestos	Impacto
Sistema electoral para jueces	Menos requisitos para postularse, podría obligar a más de 5000 jueces a renunciar
Menos capacitación y calificaciones	Posible erosión de la independencia judicial

Una amenaza para la democracia

La reforma judicial ha provocado una huelga de miles de jueces y trabajadores de los tribunales en todo el país, y el embajador de EE. UU. la calificó como "un riesgo para el funcionamiento de la democracia en México".
