Below, we highlight our favorite action cams across a wide range of budgets.

And if you're not sure where to begin, check out our buying advice after the list.

Action cams also have a place in professional work.

You should use a camera with a big sensor and interchangeable lenses when you can, but modern action cams capture video that's good enough to intercut.

Think about shots that show the interior of an exploding car, for instance—a GoPro likely recorded the event.

They have all but replaced traditional camcorders in the marketplace.

Family historians and budding cinematographers now use a GoPro or similar camera for wide shots and vlogs, while smartphones and newer mirrorless cameras are the tools of choice for home movies.

Action cameras are small, lightweight, and sometimes even waterproof.

They're useful because you can mount them to pretty much anything—from skateboards, surfboards, and bicycles, to helmets, body parts, and even your pets.

Deeper Dive: Our Top Tested Picks

GoPro Hero11 Black Best Action Cam Overall 4.

5 Outstanding Why We Picked It The GoPro Hero11 Black is, bar none, the best action cam you can buy today.

It's the latest version of the camera that defined the concept and the most technically advanced. It supports 5.3K60, 4K120, and 2.

7K240 frame rates and matches them up with best-in-class stabilizaton and horizon-leveling.

A nearly square image sensor boosts picture quality for creators pulling vertical 9:16 frames for TikTok, while its rugged and waterproof build means you don't need an add-on case.

Who It's For The Hero11 Black is as versatile an action cam as you can find.

Surfers, skateboarders, and other X Games participants can strap the camera to their person or board to get first-person views of stunts.

Vloggers should appreciate its front-facing color display and Media Mod accessory system.

And 10-bit video, new to this model, is a plus for use in cinema projects.

DJI Action 2 Most Innovative Design 4.

0 Excellent Why We Picked It The DJI Action 2 rethinks the action cam design.

It's modular and has magnetic mounting points that let you place the camera in tight spots that can't quite hold a GoPro.

You can even use the camera as a wearable body cam with the included pendant necklace mount.

Video quality is strong too, with 4K120 recording available for action and slow motion.

Who It's For If you're looking for a small, wearable camera for travel logs and adventures, the Action 2 is a good choice.

The camera's video features are competitive with GoPros and the industrial design is a winner for style-conscious influencers.

DJI Osmo Action 4 Best Low-Light Action Cam 4.

0 Excellent Why We Picked It The DJI Osmo Action 4 uses a big Type 1/1.

3 format image sensor to produce crisp video in dim light, better than what you get from the GoPro Hero11.

The Osmo's pixel count isn't as high as the Hero 11's, but it still supports up to 4K120 or 1080p240 video and takes 10MP snapshots.

We also like its 75-minute battery life, dual touch screens, and 59-foot waterproof rating. Who It's For The Osmo Action 4 is worth a look if you like to explore the world after the sun goes down.

The front touch screen is handy for self-recording, and the camera's tough build quality means you don't have to worry about it breaking during rough-and-tumble use.

GoPro Hero9 Black Best GoPro for Budget Shoppers 4.

0 Excellent Why We Picked It Now two generations old, the GoPro Hero9 Black remains in the lineup as the budget-friendly option.

Its 5K30 and 4K60 video modes aren't as good for slow motion, but the camera captures sharp video with effective stabilization at those frame rates.

It also works with the same Media Mod accessories as its pricier Hero10 and Hero11 siblings.

Who It's For This is a good pick for action cam fans who don't want to break the bank.

At around \$300, it undercuts the price of other GoPro and DJI models and gives you access to some GoPro-exclusive features, such as automated video editing and direct upload from camera to cloud.

GoPro Max Best Audio in a 360 Cam 3.

5 Good Why We Picked It GoPro's dual-lens action camera uses two lenses to record the entire world around it, but can also function as a single-lens action cam.

The Max's strengths as a 360-degree camera are its sharp video quality and software reframing tools.

That's not to mention the six internal microphones that grab the best in-camera audio of any action cam we've tested.

As you might expect from a GoPro, the Max is also tough and waterproof (though only to 16 feet). Who It's For The GoPro Max is a top pick for creators who want a dual-lens 360 camera and care a lot about audio quality.

Travel vloggers and others who present to the camera won't have to fiddle with an external mic with this one, and the Max is waterproof to boot.

GoPro offers reframing tools for creative edits too, though they're not quite as polished as what you get with the Insta360 X3.

Buying Guide: The Best Action Cameras for 2023

Do Action Cameras Need 4K?

The first thing to consider is a camera's video resolution.

4K is a minimum requirement these days, and the best models offer more than double that resolution.

The GoPro Hero11 Black, for instance, supports 5.3K.

Next, take a look at the available frame rates, expressed as frames per second (fps).

Some action cameras offer up to 240fps recording, whereas ultra-budget options may only offer 30fps.

The latter is perfectly fine for standard playback, but the frame rate matters more when you want to slow footage down in editing to create dramatic scenes.

You can slow 240fps recordings down and play them back smoothly at one-quarter speed, for instance.

If you want a cinematic look, pick a camera that has a 24fps capture option; that's the same speed that most Hollywood productions use.

The best action cams put fast frame rates and high pixel counts together—the GoPro Hero11 Black pushes 240fps at 2.

7K, for example, better than the 1080p240 you get from the DJI Osmo Action 4.

If you're more serious about video, look for a model that offers a flat video profile that grades easily.

We've not yet seen Raw video support in an action cam, but you can get that feature from larger models, including the Blackmagic Pocket Cinema 6K.

Some sort of stabilization is important as well, as it can help you get smooth footage without a tripod or gimbal.

The Best Action Cameras With Wide Lenses and 360-Degree Video

Most action cams have a lens with a wide, wide view of the world.

You are thus likely to encounter some fish-eye distortion, especially if you mount it really close to what it's filming, but newer models remove that effect automatically.

A few cameras also let you select a narrower angle for recording to avoid distortion at the outset. Some entries have two lenses for spherical video capture, though not as many as during the height of the 360-degree video fad.

The cameras that survived serve a dual purpose, leveraging software so you can use video for both VR headsets and flat screens.

Software tools allow you to manipulate video in interesting ways, as you can see in the GoPro Max clip above.

There are also outliers in the design department.

The DJI Pocket 2 has a gimbal-stabilized camera—it's not rugged, but vloggers should take a look.

How to Mount Your Action Cam

You should also consider your specific needs.

Not all cameras are suitable for every sport and certain designs lend themselves better to particular activities.

On top of that, different shapes allow for different mounting accessories and possibilities.

If you want to catch a unique perspective, like an under-skateboard shot, pay close attention to a camera's size.

If you're already invested in a system, like GoPro, which uses a proprietary mount, then sticking with what you've got can help you save money on accessories.

GoPro Hero10 Black (Credit: Jim Fisher)

Waterproofing is an important aspect to consider if you plan to record underwater or even around water.

Some waterproof cameras can go deeper than others or even have built-in waterproofing so you don't need to worry about an extra housing.

Longtime editors might be happy working with desktop editing software, but adventurers might want to cut footage on a smartphone or tablet.

Look for a model with built-in Wi-Fi at a minimum if mobile editing is important.

Mobile editing in the GoPro app (Credit: GoPro / Jim Fisher)

You get better software support from name-brand options.

GoPro and DJI include full-featured smartphone apps for on-the-go editing.

Both automatically create an edit from your shots, a plus when you just want to get a quick social post out.

If you go with a brand that doesn't supply an editing app, you have to bring your own.

It's easy enough to use iMovie or Adobe Premiere Rush to cut clips together on your phone, however.

If you need software for your desktop or laptop, check out our top video editing recommendations.

Which Action Camera Should You Get?

We've filmed hours of footage with many of the major contenders to determine where each device stands in the field.

Ultimately, your choice should come down to performance and ease of use.
