Video game that permits only one player

A single-player video game is a video game where input from only one player is expected throughout the course of the gaming session. A single-player game is usually a game that can only be played by one person, while "single-player mode" is usually a game mode designed to be played by a single player, though the game also contains multi-player modes.[1]

Most modern console games and arcade games are designed so that they can be played by a single player; although many of these games have modes that allow two or more players to play (not necessarily simultaneously), very few actually require more than one player for the game to be played. The Unreal Tournament series is one example of such.[2]

History [edit]

The earliest video games, such as Tennis for Two (1958), Spacewar! (1962), and Pong (1972), were symmetrical games designed to be played by two players. Single-player games gained popularity only after this, with early titles such as Speed Race (1974)[3] and Space Invaders (1978).

The reason for this, according to Raph Koster, is down to a combination of several factors: increasingly sophisticated computers and interfaces that enabled asymmetric gameplay, cooperative gameplay and story delivery within a gaming framework, coupled with the fact that the majority of early games players had introverted personality types (according to the Myers-Briggs personality type indicator).[4]

Although most modern games incorporate a single-player element either as the core or as one of several game modes, single-player gaming is currently viewed by the video game industry as peripheral to the future of gaming, with Electronic Arts vice president Frank Gibeau stating in 2012 that he had not approved one game to be developed as a single-player experience.[5]

The question of the financial viability of single-player AAA games was raised following the closure of Visceral Games by Electronic Arts (EA) in October 2024. Visceral had been a studio that established itself on a strong narrative single-player focus with Dead Space, and had been working on a single-player, linear narrative Star Wars game at the time of the closure; EA announced following this that they would be taking the game in a different direction, specifically "a broader experience that allows for more variety and player agency".[6] Many commentators felt that EA made the change as they did not have confidence that a studio with an AAA-scale budget

could produce a viable single-player game based on the popular Star Wars franchise. Alongside this, as well as relatively poor sales of games in the year prior that were principally AAA single-player games (Resident Evil 7, Prey, Dishonored 2, and Deus Ex: Mankind Divided) against financially successful multiplayer games and those offer a games-as-a-service model (Overwatch, Destiny 2, and Star Wars Battlefront 2), were indicators to many that the single-player model for AAA was waning.[7][8][9][10] Manveer Heir, who had left EA after finishing his gameplay design work for Mass Effect Andromeda, acknowledged that the culture within EA was against the development of single-player games, and with Visceral's closure, "that the linear single-player triple-A game at EA is dead for the time being".[11] Bethesda on December 7, 2024, decided to collaborate with Lynda Carter to launch a Public Safety Announcement to save single-player gaming.[12]

A few years later in 2024, EA was reported to have revived interest in single-player games, following the successful launch of Star Wars Jedi: Fallen Order in 2024. The company still planned on releasing live service games with multiplayer components, but began evaluating its IP catalog for more single-player titles to revive, such as a remake of the Dead Space franchise.[13] Around the same time, head of Xbox Game Studios Phil Spencer said that they still see a place for narrative-driven single-player games even though the financial drivers of the market tended to be live service games. Spencer said that developing such games with AAA-scale budgets can be risky, but with availability of services like cloud gaming and subscription services, they can gauge audience reaction to these games early on and reduce the risk involved before releases.[14]

Game elements [edit]

As the narrative and conflict in single-player gameplay is created by a computer rather than a human opponent, single-player games are able to deliver certain gaming experiences that are typically absent—or de-emphasised—in multiplayer games.[15]

Story [edit]

Single-player games rely more heavily on compelling stories to draw the player into the experience and to create a sense of investment. Humans are unpredictable, so human players - allies or enemies - cannot be relied upon to carry a narrative in a particular direction, and so multiplayer games tend not to focus heavily on a linear narrative. By contrast, many single-player games are built around a compelling story.[16]

Characters [edit]

While a multi-player game relies upon human-human interaction for its conflict, and often for its sense of camaraderie, a single-player game must build these things artificially. As such, single-player games require deeper characterisation of their non-player characters in order to create connections between the player and the sympathetic characters and to develop deeper antipathy towards the game's antagonists. This is typically true of role-playing games (RPGs), such as Dragon Quest and the Final Fantasy, which are primarily character-driven and have a different setting.

Exceptions [edit]

These game elements are not firm, fixed rules; single-player puzzle games such as Tetris or racing games focus squarely on gameplay.

Presidente Putin visitará Corea del Norte por primera vez en 24 años

El presidente Vladimir V. Putin de Rusia viajará a Corea del Norte el martes por primera vez en 24 años después de prometer llevar las relaciones con Pyongyang a nuevas alturas y combatir conjuntamente lo que llamó la "dictadura neocolonial global" de los Estados Unidos.

La guerra de Ucrania ha llevado a Sr. Putin más cerca del líder norcoreano, Kim Jong-un, quien ha ganado un nuevo estatus en el Kremlin abriendo sus vastos almacenes de municiones a Moscú.

Nueve meses atrás, después de que el Sr. Kim llegara en tren blindado a la región rusa del Lejano Oriente, los dos hombres se reunieron en un cosmódromo ruso y brindaron por su "lucha sagrada" contra el Oeste. El líder norcoreano, entre visitas a instalaciones sensibles de cohetes y aviones de combate rusos, invitó al Sr. Putin a hacer una visita recíproca.

Ahora, el presidente ruso ha aceptado la oferta. Y la creciente relación entre los dos líderes autoritarios plantea un desafío particular para Washington. Estados Unidos una vez confió en la cooperación de Moscú en sus intentos de frenar el programa nuclear y de misiles de Corea del Norte. Ahora, se enfrenta a un Kremlin decidido a sabotear los intereses geopolíticos estadounidenses en todo el mundo.

¿Qué quiere Rusia?

Antes del viaje, el Sr. Putin emitió una orden que autoriza la conclusión de un nuevo "acuerdo de asociación estratégica integral" con Corea del Norte.

También publicó un artículo en Rodong, el periódico principal de Corea del Norte, elogiando al Sr. Kim por resistir "la presión económica, provocaciones, chantaje y amenazas militares de los Estados Unidos" y agradeciendo a Pyongyang por su fuerte apoyo a las operaciones de Rusia en Ucrania.

La victoria sobre Ucrania ha sido el principio rector de la política exterior rusa durante más de dos años, y la prioridad número uno del Sr. Putin en el viaje será garantizar la cooperación continua de Corea del Norte para ayudarlo a lograr sus objetivos en el campo de batalla.

Corea del Norte es uno de los países más pobres e izolados del mundo, pero tiene uno de los ejércitos más grandes.
